About Me

As a Computer Engineer, I specialize in full-stack mobile/web development and IoT ecosystems. I am experienced in designing end-to-end systems by integrating embedded hardware with cloud-connected interfaces. I am focused on building scalable architectures through the perspective of software engineering, databases, DevOps, and system administration.

Education

Ostim Technical University 2022 – 2026
Computer Engineering (English) — GPA: 3.10/4.00 Ankara, Turkey

Havva–Sedat Avcıoğlu Science High School 2017 – 2021
Antalya, Turkey

Experience

METUunic Feb – May 2026
Software Developer Intern Ankara, Turkey

- Developed an NFC-based authentication system using the PACE protocol; integrated the Flutter interface with a Python backend and OCR document parsing.
- Implemented secure data transmission and robust backup mechanisms to ensure system stability and data integrity.

Yenimahalle Municipality Jan 2026
System and Network Management Intern Ankara, Turkey

- Worked on server virtualization (VMware), firewall management, and Active Directory administration.

SVD Sistem Jun – Jul 2025
Full Stack Developer Intern Ankara, Turkey

- Developed the NEXORA e-commerce platform using React 19, Material UI, and PHP/MySQL; built JSON-based CMS features.
- Added TR/EN multi-language support (react-i18next) and executed deployment via GitHub Pages CI/CD.

Projects

Smart Greenhouse System Feb – May 2026
Graduation Project

- Designed an autonomous IoT monitoring system with ESP32 sensors, a Python async backend, and Flutter (Mobile/Web) integration; utilized Gemini Flash AI for environmental automation.
- Established a "Fail-Safe" mechanism for edge processing during connectivity disruptions and developed a "Digital Twin" simulator to validate system logic.

SmartStock 2026
Inventory Management & Demand Forecasting Platform

- Developed a real-time inventory/expiration date management system using React/TypeScript and Firebase.
- Processed and transferred data to PostgreSQL using a Pandas-based ETL pipeline; structured transaction logs.
- Added a data analysis layer providing item-based stock depletion forecasts using moving averages.

Technical Skills

Languages: Python, JavaScript, TypeScript, PHP, Dart, C, C++

Frontend & Mobile: React, Flutter, Material UI

Backend & Databases: Flask, Firebase, MySQL, PostgreSQL

Embedded & IoT: ESP32, I2C/GPIO, sensor & relay integration

Tools: Git, GitHub Pages CI/CD, VMware

Certificates

Machine Learning in Python Jun 2024
DataCamp

Data Scientist with Python Jan 2024
DataCamp

Python Essentials Jun 2023
Cisco

Languages

English — Professional Working Proficiency

Turkish — Native
